NEW COMBINATION TRIAL WITH LIRILUMAB IN HEMATO-ONCOLOGY

- 8 trials ongoing with lirilumab in multiple indications and combinations
- 5 combination trials ongoing in hemato-oncology

Marseille, France, November 12, 2015

Innate Pharma SA (the “Company” - Euronext Paris: FR0010331421 – IPH) announced that a new trial performed by the MD Anderson cancer center started, testing a combination of nivolumab, lirilumab and 5-azacytidine for the treatment of patients with Myelodysplastic Syndrome (MDS).

This is the third trial with lirilumab supported by Bristol-Myers Squibb and performed by the MD Anderson cancer center in 2015, after the opening of one trial testing the combination of lirilumab and 5-azacytidine in relapsed/refractory AML and another trial testing the combination of lirilumab and rituximab in relapsed/refractory or high-risk untreated CLL.

These new trials bring to 8 the number of trials performed with lirilumab, testing a broad range of solid and hematological cancer indications, multiple rationales and combinations with cytotoxic antibodies, checkpoint inhibitors and chemotherapy. See clinicaltrials.gov

About lirilumab (IPH2102/BMS-986015):

Lirilumab is a first-in-class checkpoint inhibitor, fully human monoclonal antibody (mAb) that blocks the interaction between Killer-cell immunoglobulin-like receptors (KIR) on NK cells and their ligands. Blocking these receptors facilitates activation of NK cells and destruction of tumor cells.

Lirilumab is licensed to Bristol-Myers Squibb Company. As part of the agreement between Innate Pharma and Bristol-Myers Squibb, Bristol-Myers Squibb holds exclusive worldwide rights to develop, manufacture and commercialize lirilumab and related compounds blocking KIR receptors, for all indications. Under the agreement, Innate Pharma conducts the development of lirilumab through Phase II in AML.

Innate is currently testing lirilumab in a randomized, double-blind, placebo-controlled Phase II trial as maintenance treatment in elderly patients with Acute Myeloid Leukemia (“AML”) in first complete remission (“EffiKIR” trial). In addition, lirilumab is also being evaluated by Bristol-Myers Squibb in clinical trials in combination with other agents in a variety of tumor types.
About Innate Pharma:

Innate Pharma S.A. is a biopharmaceutical company discovering and developing first-in-class therapeutic antibodies for the treatment of cancer and inflammatory diseases.

The Company has three clinical-stage programs, including two checkpoint inhibitors in immuno-oncology, a new therapeutic field that is changing cancer treatment by enhancing the capability of the body's own immune cells to recognize and kill cancer cells.

Its innovative approach has translated into major alliances with leaders in the biopharmaceutical industry such as Novo Nordisk A/S, Bristol-Myers Squibb and AstraZeneca.

Listed on Euronext-Paris, Innate Pharma is based in Marseille, France, and had 112 employees at September 30, 2015.
